Abstract

- Magic: The Gathering (MTG) has complex decks and a lot of cards
  - Over 27,000 cards excluding reprints, alternate art, foreign, and special
- Managing cards and decks is challenging
- Spellbook allows players to easily view cards and decks without the strain of physical management

Features

Users can:

- Add/Remove cards from their inventory
- Add/Remove cards from their decks
- View different prints
- Search cards with various filters
    - Card type, color, power/toughness, mana value, set code

Bonuses:

- Simple UI navigation
- Accommodations for dark mode & smaller screens

Technology

- React
  - The JavaScript library used to build the interactive user interface for the project.
- Next.js
  - A framework that enables server-side rendering and improves performance for a smoother user experience.
- Supabase
  - The backend platform used for our database, authentication, and real-time syncing of inventory and deck data.
- Vercel
  - A cloud platform used to deploy and host the web app, with seamless integration for Next.js projects.

Technology (cont.)

- Scryfall API
  - A well-maintained Magic: The Gathering API that provides detailed and up-to-date card data.
- VS Code
  - The IDE used for development, offering a simple workflow with built-in GitHub integration.
- GitHub
  - A version control platform used to manage the codebase and support collaboration.

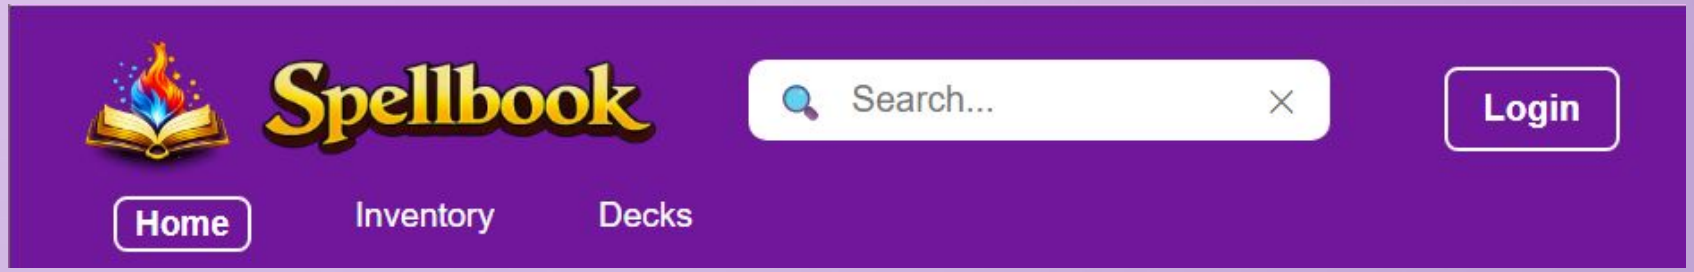
Design

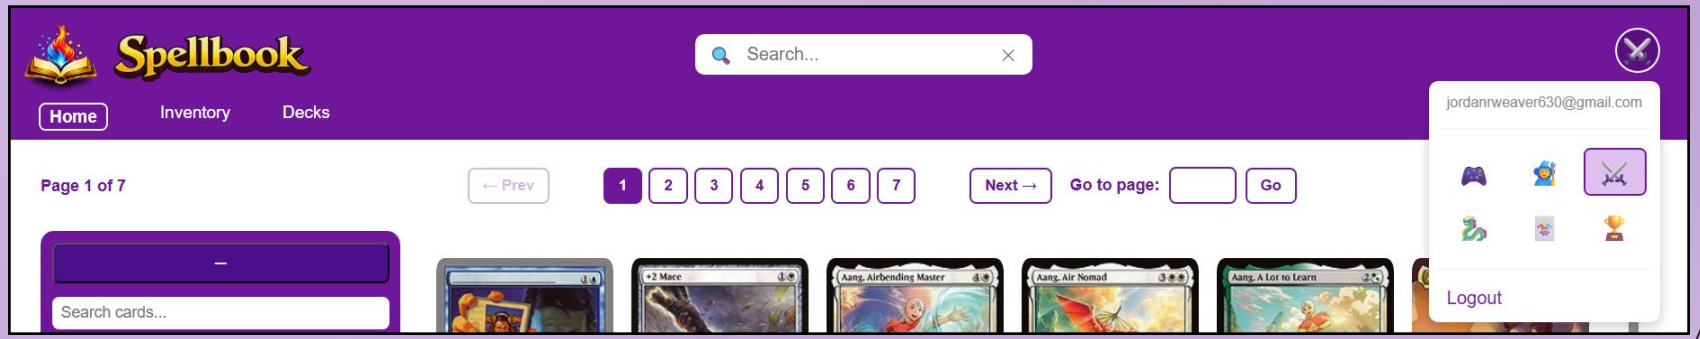
- Navbar
  - Enables users to search for a specific card, navigate between pages, and access their profile.
- AvatarPicker
  - Allows users to choose from six preset avatar options.
- CollapsibleMenu
  - Provides card search functionality along with multiple filtering options.
- CardGrid
  - Displays a paginated grid of MTG cards that are filterable.
- CardInfo
  - Shows card images, details, legality status, and options to add or remove cards from inventory. Also displays alternate prints of the same card.

Design (cont.)

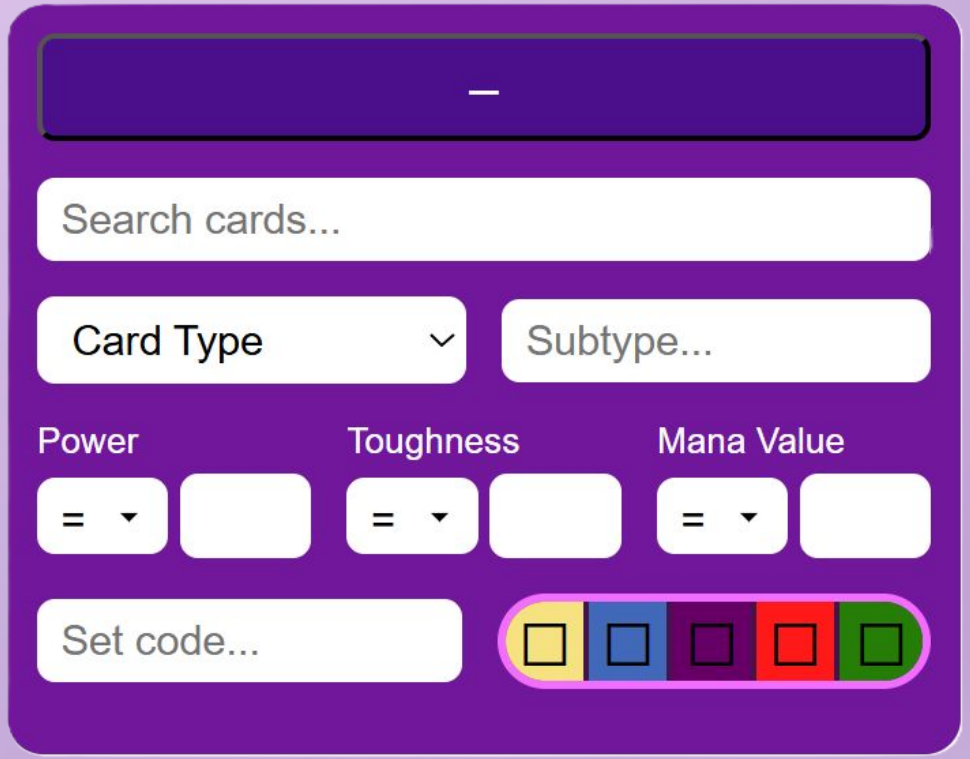
- InventoryCardGrid
  - Displays all cards in the user’s inventory along with their quantities.
- DeckGrid
  - Displays a grid of the user's decks, each showing the deck name, format, and a popup with deck details.
- Deck page
  - Displays a specific deck’s contents, mana curve, and some information with options to add or remove cards, rename, or delete the deck.
- Login page
  - Provides users with the option to sign in using their Google account.

Navbar & AvatarPicker





Collapsible Menu



Deploying the Website

- Get the code
  - Copy repository from GitHub

- Create backend
  - Setup Supabase and create the necessary tables
  - Setup Vercel
  - Connect Vercel, Supabase, and GitHub with integrated plugins
  - Enable Google OAuth on Supabase

- Deploy
  - In Vercel set the Root Directory to the correct file (nextinventorymanager)

Known Issues

- Limit to the number of cards accessible at a time
- Not showing double-sided Jurassic Park lands
- Limited foreign language support
